SKILLS

Programming Languages: Java, Python, TypeScript, JavaScript, SQL, C++, C#, Swift, React, Next.js, Angular, Node.js, HTML5, CSS3, PostgreSQL, MySQL, Tailwind CSS

Platforms: MongoDB, Supabase, Redis, Git, Docker, AWS, Google Cloud Platform

EDUCATION

Algoma University || Brampton, ON

Graduated June 2026

Honours Bachelor of Computer Science Degree

3.7 / 4.0 GPA

Relevant coursework: Data Structures, Operating Systems, Artificial Intelligence, Software Engineering, Distributed Systems, Theory of Computing, Techniques of Systems Analysis, Web Database Management, Introduction to Cybersecurity, Analysis of Algorithms

George Brown Polytechnic || Toronto, ON

Graduated August 2023

Computer Programming & Analysis Advanced Diploma

PROJECTS

NetPulse (Distributed Uptime Monitoring SaaS) | <https://netpulsemanage.dev> June 2026

Tech Stack: Typescript, JavaScript, Terraform

- Designed, built, and deployed a full-stack uptime monitoring platform with combination of Next.js, TypeScript and JavaScript so IT professionals get to monitor incidents and check for issues with networking which means proactive response to network issues and improvements to network capacity resulting in 99.9% uptime.
- Implemented Zero trust software architecture so that Mutual TLS encryption is implemented which means it's hard for attackers to steal login credentials resulting in fewer cyberattack rates.
- Deployed scale to zero application model so that cost only occurs if users use it which means more efficiencies resulting in lower operational costs.

moveYSplash (Academic Project) | <https://move-y-splash.com>

December 2025

Tech Stack: Typescript, JavaScript, PostgreSQL, Ably

- Used efficient algorithms so that users can socialize quickly and efficiently which means reduced wait times to log into social media application resulting in 90% performance improvement.
- Implemented Ably chat API system so two-way chat application and video calls work which means users can message and video call reliably resulting in 99.9% reliable video call performance.
- Implemented Supabase database so personal information can be stored inside social media app which means user can use the application without re-registering resulting in 0.1% data loss.

EXPERIENCE

Pie & AI: InsureTech Hackathon | Toronto, ON

August 2026

- Designing proactive solution to give drivers a reward for following rules of the road, so that insurance premiums go down faster based on driving behavior, which means more savings for good drivers, resulting in safer driving habits.
- Building AI powered solution to help identify car insurance rates, so that premiums are decided based on accidents or tickets, which means higher premiums for traffic tickets, resulting in lower traffic violation rate.
- Designing proactive rewards system to lower premiums based on changes made to client's home, so insurance premiums go down faster based on improvements such as home alarm system, which means more savings for low-risk homeowners, resulting in lower burglary rates.
